

Material combination: 3D aluminium with cork

## Green Label

The Green Label product line encompasses products and materials that are more sustainable. These include the more environmentally friendly labels & foil stickers, such as the newly developed R-PET and phthalate-free polypropylene films, through to lettering and emblems made from new label materials such as cork and wood.

In addition to the Green Label solutions, the exact CO<sub>2</sub> emissions of all other product lines will in future be determined in much greater detail than was previously possible (PCF). This will provide you with a comprehensible basis for making decisions about more sustainable alternatives.
